I oppose SB 1110, 1115, 1116, 1117, & 1118.

Philip McKay was seriously and permanently injured when surgeons breached his pedicular cortex, resulting in complete paralysis below the T5 chest level. Prior to this horrific breach of the standard of care, Philip was a 19 year old teenage male who had adapted admirably to living with Asperger's syndrome, acquiring a part-time job at a library while attending school, and could fully walk and participate in most exercises without difficulty. Philip's injuries are permanent and, while he could manage his Asperger's syndrome, Philip will never be able to fully adapt to this injury.
